# MobaXterm
Linux-Feeling unter Windows

Cygwin basiertes Linux-Toolkit

mit tabbed Sessions, X-Server, (S)FTP-Client, Telnet-Client,

SSH-Client und -Agent, Cygwin-Tools (sed, wget, awk, grep, …),

Paket-Manager (apt-cyg) etc.

Alexander Nehmer - TÜBIX / 11. Juni 2016

Sessions

Tabbed Panes

Split Screen

X Server

• ssh mit X11 forwarding

Paket-Manager apt-cyg

```
[               ] ➤ apt-cyg
apt-cyg: Installs and removes Cygwin packages.
  "apt-cyg install <package names>" to install packages
  "apt-cyg remove <package names>" to remove packages
  "apt-cyg update" to update setup.ini
  "apt-cyg show" to show installed packages
  "apt-cyg find <patterns>" to find packages matching patterns
  "apt-cyg describe <patterns>" to describe packages matching patterns
  "apt-cyg packageof <commands or files>" to locate parent packages
  "apt-cyg rebase to rebase installed libraries
Options:
  --localrepo, -l <folder_path> : set local cygwin repository
  --mirror, -m <url>            : set mirror
  --file, -f <file>             : read package names from file
  --noupdate, -u                : don't update setup.ini from mirror
  --help
  --version
```

```
[               ] ➤ apt-cyg install git
Trying to download file setup.bz2
Updated setup.ini
Found package git
